SelectScience® Pioneers online Communication and Promotes Scientific Success

SelectScience® promotes scientists and their work, accelerating the communication of successful science. Through trusted lab product reviews, virtual events, thought-leading webinars, features on hot scientific topics, eBooks and more, independent online publisher SelectScience® provides scientists across the world with vital information about the best products and techniques to use in their work.

Some recent contributions from SelectScience® to the scientific community

SOFTWARE

Powerful imaging data toolbox can streamline drug discovery workflow

In this eBook, discover a multifaceted 2D-5D software platform from Thermo Fisher Scientific which offers a comprehensive toolbox of imaging processing methods that can be automated through custom detection workflows. Read eBook [here](#)

WEBINARS

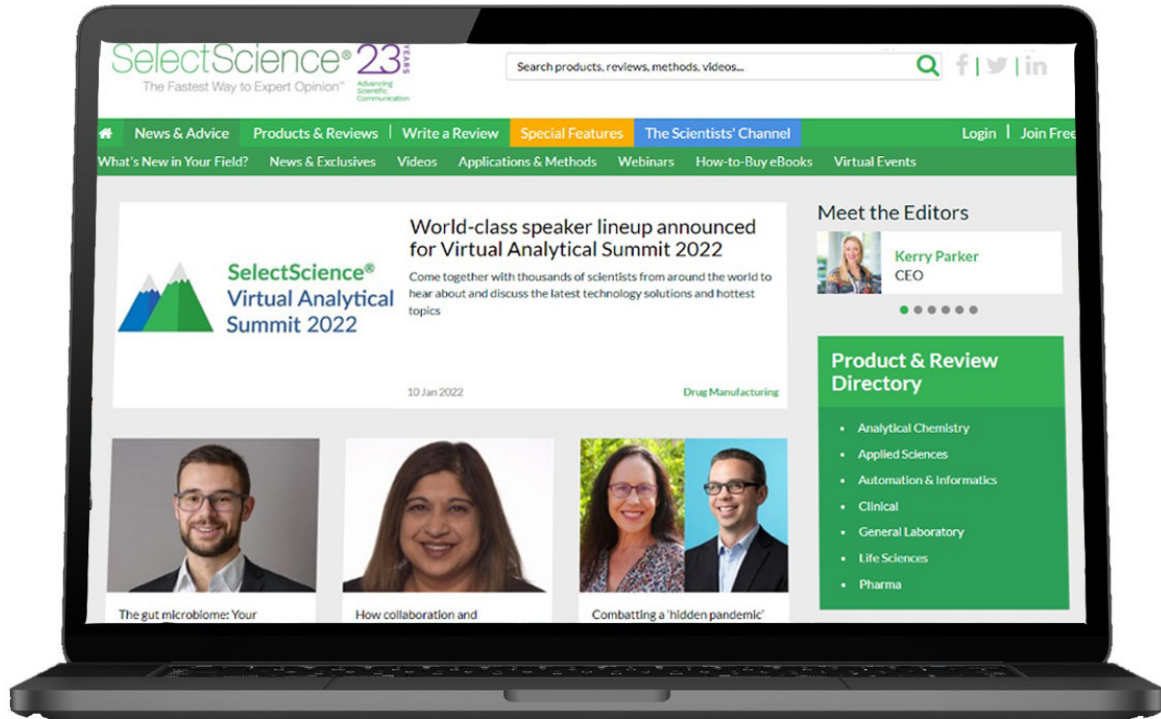

What can biological EDS do for you? The answers to frequently asked questions on analytical biological electron microscopy

Energy Dispersive X-ray Spectrometry (EDS) measures and maps the distribution of elements within a sample. It is a powerful imaging tool, providing compositional data in combination with electron images to generate multi-color electron microscopy, for fast and accurate identification of features within your samples. This webinar will cover some of the frequently asked questions about biological EDS. Access this webinar [here](#)

Expert Insight: Raman spectroscopy as a practical solution to today's characterization challenges: Your questions answered

Learn about the advances in hardware and software that have made today's instrumentation accessible to non-Raman experts. This technique is combined with confocal microscopy to provide Raman imaging with micron-scale resolution in either two or three dimensions. Access this webinar [here](#)

SelectScience® is the leading independent online publisher connecting scientists to the best laboratory products and applications.

- Working with Scientists to Make the Future Healthier.
- Informing scientists about the best products and applications.
- Connecting manufacturers with their customers to develop, promote and sell technologies.
